McCaw Hall	Seattle Center	2003	none*
Seattle Justice Center	Fleets & Facilities	2002	Silver
Fisher Pavilion	Seattle Center	2002	Certified*

\*When the policy was adopted in February of 2000, the City had a dozen projects in design or about to enter into design. Incorporating LEED criteria into the projects already in process, with pre-established budgets, required City project managers and design teams to re-think design solutions. While some of these early projects were unable to achieve a LEED Silver level, they nonetheless incorporated significant green strategies into the completed projects. For instance, Fisher Pavilion which achieved a LEED<sup>TM</sup> Certified rating still reduced potable water use by 50%, uses 25% less potable water for irrigation, used 49% of materials from regional sources, decreased impervious surfaces by 16%, and recycled 87% of construction and demolition waste.
